

# SPANISH DICTIONARY

Oswaldo Panza Doliani

## INTRODUCTION

amp.wordmeaning.org is an open and collaborative dictionary project that, apart from being able to consult meanings of words, also offers its users the possibility of including new words or nuancing the meaning of existing words in it. As is understandable, this project would be impossible to carry out without the esteemed collaboration of the people who follow us around the world. This e-Book, therefore, was born with the intention of paying a small tribute to all our collaborators.

Osvaldo Panza Doliani has contributed to the dictionary with 10 meanings that we have approved and collected in this small book. We hope that the reader is very valuable and if you find it useful or want to be part of the project, do not hesitate to visit our website, we will be delighted to receive you.

## **aprendizaje**

Meaning Learning Learning is brain function. It is a product of the plastic structures of the brain. It results from the dynamism of the neural geometries associated with its glies, in continuous evolution. These events allow 1) to develop epigenetic and genetic inherited memories and 2) to construct emotional memories as frameworks of the cognitive memories of circumstantial experiences imposed by teachings, study and / or daily communications. Thus, learning emerges from mnemonic integration and is expressed through free will with explicit or inhibitory behaviors characterizing identity.

## **aprendizaje**

Meaning Learning Learning is brain function. It is a product of the plastic structures of the brain. It results from the dynamism of the neural geometries associated with its glies, in continuous evolution. These events allow 1) to develop epigenetic and genetic inherited memories and 2) to construct emotional memories as frameworks of the cognitive memories of circumstantial experiences imposed by teachings, study and / or daily communications. Thus, learning emerges from mnemonic integration and is expressed through free will with explicit or inhibitory behaviors characterizing identity.

## **aprendizaje significativo**

Meaningful learning occurs when information, received as teaching, is studied, developing and constructing memories that are integrated into existing ones either as: 1) Ampliatory concepts or 2) New concepts adding the new contents associated or not to those that the individual possesses. In both cases the person increases the efficacies of his integrated memories and the limits of his free will autonomously, that is, without the need to be helped.

## **cerebro**

As a new vision: The brain acts as a biological processor, dynamic and therefore in continuous change. It concretizes its action by the transcendental capacity to self-construct, doing so in a multisensory way. Thus it responds to the demands of: 1) the circumstances that make up the world of external objects or realities and 2) the circumstances that integrate the inner or subjective world interpreting the external realities to which it must respond in order to continue existing and being.

## **conocer**

Meaning of Knowing: The act of knowing involves sequences of integrated brain processes that begin with the messages that form the external environment or objective world activating the organs of the senses and inducing the interpretation of oneself, as an integral part of the reality of the world of objects. They are the experiences of circumstances that determine the dynamics of the past and provide ideal tools to project and prospectively program probable futures.

## **conocerse**

The act of knowing oneself involves sequences of integrated brain processes that are initiated by the emerging messages of integrated memories, chronomesically constructed and preserved in a latent way, which are energized by changing their current effectiveness when they are summoned by temporal reality through evocation, imagination or circumstantial memory. These events organically sustain the experiences of the inner or subjective world, which are the biological foundations for introspective analysis, reflection, self-awareness, self-criticism or self-assessment.

## **psi**

Meaning of psi " It is brain function emerging from the integrated memories of the unit person. It is the product of evocations, memories or imaginations, it never causes"

## **significado de persona**

"By virtue of his connatural evolution and by the coordinated and cooperative action of the biological structures that allow him to be, the person is a vital biopsychological unit in continuous change. Transiting the transience of the present that makes it irretrievable, it builds the dynamism of its past mediated by basic atomic and molecular structures in incessant evolutions on which its projectable, probable and inevitable future depends.
